Message from the Guest Editors

Dear Colleagues,

This special issue intends to cover recent advances regarding the identification and control of microbial pathogens in horticulture. Although all different approaches are welcome, we have special interest in control strategies using biocontrol agents or natural compounds, and in studies that specify the biocontrol mechanisms. The issue will cover all kinds of horticultural crops, including floricultural and ornamental plants, fruits and vegetables. Methods for the control of pathogens during the preharvest and postharvest stages are suitable. The special issue will focus on microbial pathogens, including fungal, bacterial, and oomycete pathogens. The submitted studies must contain not only mechanistic studies but also in vivo experiments that demonstrate the efficacy of the control approaches.

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (Horticulture) / CiteScore - Q2 (*Horticulture*)
