Message from the Guest Editors

As the use of new ornamental plants is increasing, it is important to develop propagation methods and understand the flowering of each plant for the use of ornamental plants. Although many studies related to propagation and flowering have been conducted, many questions remain with regard to a variety of plant species. Expanding the use of ornamental plants by controlling various environmental factors, as well as the growth response of plants in natural conditions, will help us to use ornamental plants in indoor and outdoor gardens. Therefore, this SI aims to expand our understanding of propagation and flowering in ornamental plants.

This Special Issue welcomes original and review articles in (but not limited to) the following areas:

- Dormancy in seeds and techniques for dormancy breaking
- Optimized plant propagation method
- Controlling the growth and flowering through light, temperature, irrigation, and other factors
- Plant responses in both outdoor and indoor settings
- Varied growth and flowering of ornamental plants
- Utilizing ornamental plants in garden

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (Horticulture) / CiteScore - Q2 (*Horticulture*)
