Message from the Guest Editors

Dear Colleagues,

Minor changes in environmental factors such as increasing temperature or a low and uneven rainfall pattern represent a major impact in agrodiversity and crop productivity. In this sense, research focused on promoting climate-smart agriculture using salt and drought tolerant seeds and plants is a good option to reduce crop risks, enhance resilience and maintain agrodiversity. In addition, current gardening in most countries should be oriented towards the use of plants resistant to foreseeable changes in temperature and the decrease in available water, and therefore to the use of species capable of surviving in an adverse environment using available resources.

This special issue on “Responses to Environmental Stress in Ornamental Plants/Horticultural Plants” covers different aspects from germination to biochemical and morphological response of ornamental and horticultural plants and related species to environmental stress. Original research providing new information on these aspects and on the use of wild resistant plants in gardening is welcomed.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (Horticulture) / CiteScore - Q2 (*Horticulture*)
