Deadline for manuscript submissions:

closed (31 May 2021)

Message from the Guest Editors

Sleep, physical activity, and sedentary behaviour (including screen time) are associated with a wide range of important health and developmental outcomes in children and adolescents. To date, most research has examined these behaviours in isolation. However, recently, the focus has shifted to following a more integrated approach in which it is recognised that 24-hour movement behaviours are co-dependent. It is important to examine how different combinations of behaviours influence a young person's health. Therefore, in this Special Issue, interested authors are invited to contribute their research in the field of 24-hour movement behaviours in the under 5s, children, and adolescents. Research that addresses the measurement of 24-hour movement behaviours, levels of 24-hour movement behaviours, and the associations of the combination of 24-hour movement behaviours and health in those under 18 years of age is suitable for consideration in this Special Issue.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
