Message from the Guest Editors

Dear Colleagues,

In 2019, it was estimated that 703,000 people died by suicide worldwide, and suicide attempts in addition to self-injuries are precursors to this problem. Self-injurious behaviors are the most common among adolescents and young adults, and are estimated to begin between the ages of 12 and 14. The prevalence of self-injury is between 7.5 and 46.5% in adolescents, 39% in college students, and between 4 and 23% in adults. Despite increasing knowledge about this problem, it is important to examine the developmental trajectories, antecedents, and risk factors associated with it.

Suicidal behaviors have a higher prevalence than suicide. After the COVID-19 pandemic, suicide rates have not increased significantly, although more frequent suicidal thoughts have been observed in people infected with COVID-19. Although suicide rates may not have significantly increased, we are in an environment with barriers to providing solutions for those who experience this problem; more evidence is needed regarding epidemiology, patterns of care, and prevention.

We invite you to participate in this Special Issue, in which we will accept academic papers of high scientific quality.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
