

2nd Edition: Digital and Community-Based Interventions to Address Determinants of Food-Related Behaviors to Reduce Obesity and Chronic Disease

Guest Editors:

Dr. Jylana L. Sheats

Social, Behavioral, and Population Sciences, School of Public Health and Tropical Medicine, Tulane University, New Orleans, LA 70112, USA

Dr. Elvin Thomaseo Burton

Department of Child and Adolescent Psychiatry and Behavioral Sciences, Children's Hospital of Philadelphia, Philadelphia, PA 19104, USA

Deadline for manuscript submissions:

1 June 2025

Message from the Guest Editors

Food-related behaviors (e.g., food choice, purchasing, preparation, consumption, eating patterns, nutrient intake) are influenced by a range of factors at the individual, familial, community, societal and policy level. These factors are often situated within Social Determinants of Health—ultimately impacting health and wellbeing. Due to systemic inequities, historically marginalized, underserved, and vulnerable populations experience these impacts and disparities at higher rates. We propose a call to action for not only research innovation, but also ensuring that research methods are designed, implemented, and disseminated in ways that resonate with the intended population(s).

Building upon the research of scholars in the first edition of this special issue, in this second edition we invite scholars, researchers, and practitioners to submit digital, non-digital, and community-based research that: 1) aims to address determinants of food-related behaviors; and/or 2) within the context of the theme, describes culturally informed/responsive research methods used to better design, implement, and disseminate solutions to the population(s) of interest.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
