### Message from the Guest Editors

The COVID-19 pandemic, which emerged at the end of 2019, is affecting health, wellbeing, and the economy worldwide. Older people at greater risk of COVID-19 infection and death. However, there is emerging evidence that children and young adults may also be at great risk, suffering from months if not years of lost schooling and social interaction at key periods of development, the disappearance of training opportunities and routes to employment, and an increase in abuse and neglect of children during lockdown. The transference of health services and resources in response to the pandemic is likely to disrupt routine surveillance of child health and immunization schedules, maternity services and practices, and child and adolescent mental health services. Furthermore, existing disadvantages may be exacerbated, with a concomitant increase in health and educational inequality. Lockdown experiences differ widely depending on individual circumstances.

We welcome manuscripts that broadly explore the unintended consequences of the pandemic on children and young people, as well as potential interventions, given that the effects of COVID-19 will be felt globally for years to come.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
