Application of Remote Sensing in Land Use Management

Guest Editor:

Dr. Qingyun Yan
School of Remote Sensing and Geomatics Engineering, Nanjing University of Information Science and Technology, Nanjing, 210044, China

Deadline for manuscript submissions:
closed (30 April 2023)

Message from the Guest Editor

Due to human activities and climate change, global and regional land use/cover changes (LUCCs) are evolving dramatically and knowledge about them is important. Remote sensing has appeared as an efficient and cost-effective way for monitoring earth's surface in recent years, offering an excellent solution to obtain such information. Various remote sensing platforms and data have been used to comprehensively derive LUCC. However, there are still many challenges. The goal of this Special Issue is to present the relevant topics, latest trends, and exciting discoveries. The listed keywords suggest just a few of the many possibilities.

Special Issue

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
