### Message from the Guest Editor

Dear Colleagues,

The WHO proposed universal oral health coverage for all people by 2030., as the reflection to global oral health crisis. The oral health crisis is linked to another global health problem, antimicrobial resistance, and dentists could help by becoming involved with collaborative antimicrobial stewardship. Oral health is integral to overall health, well-being, and optimal quality of life, and shares modifiable risk factors with leading noncommunicable diseases, such as cardiovascular disease and diabetes. These facts impose that patient-tailored oral health strategies need to be integrated within the appropriate overall health agenda. Such tailored diagnosis/treatment relies on the introduction of supplemental tools to improve the precision of diagnosis and treatment planning, such as artificial intelligence, which could in the post-COVID-19 era improve oral health services and decrease oral health inequalities.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
