Deadline for manuscript  
submissions:

**31 October 2024**

### Message from the Guest Editors

The identification of factors associated with patient safety has been an issue of research in several studies. The focus on worker health has been an investigated association that indicates that fatigued workers can more easily make mistakes in healthcare. This association, at times, can also compromise safety culture, since if the worker does not find a healthy and favorable environment to report incidents, the necessary changes in the work processes in health services become impaired. Another factor to be highlighted is health behavior. Several theories can be used to explain behavior, and one of them is the theory of planned behavior, which can be an important element when it comes to adherence to patient safety protocols by workers. In this sense, this Special Issue of *IJERPH* is a proposal to disseminate research results that have analyzed these constructs, associated or not, but that impact in some way the work and health of people.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
