Message from the Guest Editor

The COVID-19 pandemic has had a major impact on infants, children, and adolescents. Because the clinical course of SARS-CoV-2 is generally mild in young subjects, the major challenges in this age group were underestimated at the beginning of the pandemic. However, it has now become clear that timely research is necessary to guide healthcare and welfare politics to provide adequate vaccination and surveillance strategies for children and adolescents, clarify the somatic consequences such as PIMS and post-(long) COVID-19 symptoms, and assess the consequences of disease management measures such as social distancing, home schooling, or mask wearing for wellbeing and mental health of the next generation. The psychosocial burden on children and adolescents has to be quantified and effective measures to return to healthy lives and learn our lesson for future pandemic situations have to be based on solid evidence. Therefore, this Special Issue focuses on original data as well as reviews on the abovementioned topics.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
