Deadline for manuscript
submissions:

30 October 2024

Message from the Guest Editor

The significance of migration has gained international recognition in the last few years. Migration is acknowledged as an integral aspect of the Sustainable Development Goals established in 2015 by the United Nations. Migrants comprise a significant segment of the world's population. In mid-2020, nearly 281 million people were migrants, according to the International Organization for Migration. To date, several of the “pull” and “push” factors have been documented for the contemporary global migration along with settlement challenges. The experiences of immigrant communities in relation to newly emerging public health issues need much more attention. Some examples of the emerging issues are the COVID-19 pandemic, natural catastrophes, mental stress, violence and trauma, aging, and food insecurity. We welcome your contributions to this Special Issue, especially for the identification of policy, practice, and community-based pathways for addressing inequities in health and access to care amongst immigrant communities for the newly emerging public health issues.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
