closed (1 December 2020)

Message from the Guest Editors

The spaces humans occupy have an important influence on actual activity and opportunities to be active. This Special Issue aims to consider available evidence and debates relating to active spaces. Our intention is to define ‘active spaces’ broadly and attract research from a range of disciplines. Spaces may include spaces to work, play, learn and age, such as wild areas, office buildings, transport, and any other features that might promote or restrict activity. Activity may be physical or social. We are interested in all ages. Research can include individuals and/or groups.

We are interested in receiving original empirical studies, systematic reviews, meta-analyses and theoretical papers. Acceptable empirical studies range from case studies to large-scale RCTs and longitudinal studies. We invite qualitative and quantitative methods. Reports on innovative measures and analyses are particularly welcome. The quality of the research is important and we are unlikely to accept exploratory studies.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
