Deadline for manuscript  
submissions:

**closed (23 November 2023)**

### Message from the Guest Editor

Dear Colleagues,

Ecological water environments and water quality are closely linked with human life. However, the discharge of wastewater containing various toxic organic pollutants into water lacking efficient treatment seriously threatens human health and natural environments. Although Advanced Oxidation Technologies (AOTs) are considered promising for refractory organics degradation, several shortcomings, including inactivation of catalysts, low utilization of oxidants, unwanted adverse reactions, and seriously inhibitory effects in complex systems, still limit AOTs' application in wastewater treatment. However, deep insight into catalytic mechanisms, including the confinement effect, reactive oxygen species (ROS) transformation, charge migration and interface interaction, and possible degradation pathway and intermediates can promote advancement in this field. This Special Issue presents a platform for scholars to share current research and new findings concerning AOTs (Fenton/Fenton-like reactions, catalytic ozonation, photocatalytic oxidation/reduction, electrocatalysis, chlorine disinfection, etc).

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
