Message from the Guest Editor

Dear Colleagues,

The relationship between parental stress and child development has been a topic of interest for researchers for several decades. Studies have consistently shown that high levels of parental stress can negatively impact several domains of child development, with potential long-term consequences. Parental stress can manifest in various forms, including financial, work-related, and relationship-related stress. Parents under stress may become less responsive and consistent in their interactions with their children. Furthermore, the effects of parental stress on child development can be transmitted across generations. Children who grow up in a stressful environment may be more prone to experience stress as adults, it is important to note that there are also factors that can buffer these effects. Papers addressing these topics are invited for this Special Issue, especially those combining a high academic standard coupled with a practical focus on providing interventions for preventing negative outcomes and promoting positive parent-child relationships and the overall health and well-being of families.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
