Message from the Guest Editors

Due to the increasing number of older adults, the progressive aging of the population requires the implementation of appropriate and innovative strategies for mitigating the adverse effects of this process on both individuals and the socio-economic system. Although one of the main effects of aging is undoubtedly linked to the decline in cognitive functions, it should be stressed that this decline, which has both functional and neurological aspects, even if it cannot be avoided, can be significantly postponed (Boots et al. 2015; Miceli & Gangemi, 2011; Misuraca, Miceli, & Teuscher, 2017; Smart et al., 2014; Miceli, Maniscalco, & Matranga, 2019). Over the last few decades, researchers have made an enormous amount of progress in understanding the biological processes underlying cognition, shedding light on the influence of both lifestyles and different technological aids (e.g., serious games, robotics, artificial intelligence) on the development or enhancement of human cognitive abilities.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
