Message from the Guest Editors

Community-centred and community-led approaches are increasingly being accepted and implemented as an effective way to improve people's health and well-being and reduce health inequalities. However, the evidence base on these approaches is still relatively sparse and fraught with methodological challenges.

This Special Issue is open to studies that contribute to building the evidence base for community-centred and community-led approaches to public health. The Special Issue will consider the following types of studies: controlled trials, cohort studies, case-control studies, natural experiments, mixed method evaluations, qualitative studies, policy studies, pilot studies, opinion papers, narrative reviews, systematic reviews and meta-analyses.

We look forward to receiving your submissions.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
