Message from the Guest Editor

Dear Colleagues,

Around the world, the rates of both domestic violence and substance use are increasing. These are both complex problems that frequently co-occur, and domestic violence outcomes can look very different depending on whether the substance use is by victims, perpetrators, or both partners in violent relationships. Since both substance use problems and domestic violence are most likely to transpire during reproductive and child-rearing years (defined as 15–49), many children are growing up in homes where these issues are present. While the overlap of substance use and domestic violence is well-documented, less is known about how children are impacted. More information is needed to understand how exposure to substance use and domestic violence affects the well-being of children.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
