Message from the Guest Editors

Cancer has long become a global health issue. Medical advances in early detection, treatment, and survivorship care continue to enhance patient outcomes and the probability of survival. Many people with a history of cancer require ongoing medical care due to chronic health conditions and late adverse effects that place a considerable strain on individuals, families, communities, health care providers, and governments. Long-term outcomes of cancer survivors past 5 years since diagnosis are under-researched and the economic impact is uncertain. Health economics research is the ideal platform to measure the long-term economic burden of cancer survivors from the patient, healthcare and societal perspectives, to aid decision-making, optimize care and use scarce health care resources responsibly.

For this Special Issue ‘Economic Impact and Cost-Effectiveness Evaluations in Long-term Cancer Survivorship (>5yrs)’ we would like to invite high-quality health economics research from a range of topics focusing on long-term outcomes beyond the initial diagnosis and treatment for cancer.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
