Message from the Guest Editors

Groundwater is the most abundant freshwater resource available on earth. Groundwater contamination occurs in these urbanized areas due to the illegal discharge of sewage, inappropriate disposal of solid waste, and so on. As a consequence, groundwater quality in these areas becomes worse, and groundwater-related diseases lead to the death of thousands of people every year. This Special Issue focuses on the impacts of anthropogenic factors on the quality of the groundwater environment. We encourage reserachers who are interested in this Special Issue to contact us at Liangping.Li@sdsmt.edu and huangguanxing2004@126.com.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
