Deadline for manuscript
submissions:

closed (31 December 2020)

Message from the Guest Editor

Understanding the current health climate and upcoming healthcare trends can help stakeholders to stay abreast of important changes and be prepared for the future needs of both the population and the healthcare workforce. There is also increased recognition of women's health issues more broadly, with research focusing on improving women's health across the lifespan, particularly during the preconception and reproductive stages.

Today, the disease landscape has shifted from infectious to chronic diseases, and the impact of nutrition, lifestyle, and environmental factors on health has become more important than ever.

This Special Issue seeks research papers on current trends in health and disease, including women's health, the changing health workforce, health system funding models, and novel explorations of disease pathways, including the role of nutrition, metabolism, and inflammation.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
