Message from the Guest Editors

Health disparities stemming from racism, gender inequality, and income inequities are contributing to the need to reimagine global health governance in the 21st century. As scientists warn, future pandemics are inevitable if we do not fundamentally change our interactions with the environment. Climate change and land use change, are increasing the probability of outbreaks. Our collective ability to build resilient, just, and equitable human habitats in light of climate change through effective strategies is critical to disease mitigation. What is the future of global health governance? What is the role of the World Health Organization and other multilateral actors? What have we learned from the Covid-19 pandemic? How can we build systems that are founded on the principles of equity, justice, and equality? This interdisciplinary Special Issue invites manuscripts from scholars and practitioners with insights for global health governance in a post-pandemic world.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
