Message from the Guest Editors

Dear Colleagues,

Over 50 million people worldwide are living with dementia, with numbers growing steadily. However, not everyone receives a diagnosis, and those with a diagnosis might struggle to access some types of support, ranging from peer support groups, day care centres, respite, and paid home care, to care homes. Burgeoning evidence suggests that people's backgrounds are linked to what they can access. Some barriers to receiving a diagnosis or the right level of care at the right time might include ethnic background, socio-economic status, education, or where people live—in rural or urban regions. Moreover, there might be further inequalities when looking at low- and middle-income countries.

This Special Issue on “Health Inequalities in Dementia Care” welcomes submissions in this field, to cover the broad spectrum of inequalities. We are interested in qualitative and quantitative research and look forward to receiving a wide range of submissions.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
