Message from the Guest Editors

Human migration and mobility are shaping contemporary societies in an increasingly interconnected world. However, health systems have not kept pace with the demands and needs raised by a world on the move. As such, health needs, health risks, and broader determinants of health for increasing numbers of international migrants, asylum seekers, and refugees often go unnoticed and unresponded to. The Covid-19 pandemic has made these gaps and inequities painfully visible. The topics for this Special Issue include (but are not limited to): cross-border harmonisation of definitions of migrants, asylum seekers, and refugees in health information systems; advocacy and action in response to health monitoring and data (whether health interventions or health response); access to and integration of migrants, refugees, and asylum seekers in health monitoring policies; systems and strategies to improve health data in detention and reception and transit contexts, which pose challenges in terms of access, data collection, and monitoring; We cordially invite the submission of high-quality papers that address any of the topics above.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
