Message from the Guest Editor

Japan, which is experiencing a rapidly-aging trend has not only the longest life expectancy but also healthy life expectancy in the world. Diverse findings and lessons from Japan could provide significant implications to other nations: for example, interventions to senior individuals (e.g., prevention to disease, dementia, and frailty), institutions and policies (e.g., universal health coverage system, long-term care insurance system), and community development (e.g., age-friendly community, dementia-friendly community).

This Special Issue of International Journal of Environmental Research and Public Health (IJERPH) is devoted to making a substantial contribution to knowledge accumulation about healthy aging strategies from Japan. We welcome manuscripts from various academic fields related to gerontology, for instance, public health, medicine, nursing, social welfare, sociology, psychology, and economics. We also encourage intervention study, case reports, and review as well as an observational study.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
