Message from the Guest Editor

The influence of intergenerational factors on health is gaining increasing interest, particularly as scientific understanding of the psychological and physiological processes and mechanisms involved has advanced. Research that utilizes these findings in the form of interventions offers the promise of improving health and well-being across generations. In this Special Issue of the International Journal of Research and Public Health, we invite empirical research papers, reviews, methodological reviews, brief reports, and commentaries that contribute to understanding of intergenerational effects on health, with a focus on the role of psychosocial factors. We welcome studies and reviews that have the potential to change health and clinical care and health policy, as well as those that examine mechanisms of health outcome for children through to adults and older populations. In particular, we invite findings from a variety of methodologies, including qualitative analysis as well as quantitative assessment and mixed methods research.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
