submissions:

closed (31 December 2022)

Message from the Guest Editor

The emergence of new technologies, industries, services, intensive farming is associated with the ever-increasing use of chemical compounds, as well as physical and biological factors. Chemicals and natural pathogens can affect all systems of the human body. Acute effects, such as poisoning injury as a result of a single exposure, are usually obvious and do not require precious time for diagnostics, in contrast to the consequences caused by repeated insignificant strong influences over a long period of time. Despite the significant efforts of scientists, effective antidotes for many toxicants have not yet been found. This Special Issue plans to give an overview of the topical advances in the field of diagnostics and pharmacological correction of internal conditions provoked by different negative environmental impacts. Potential topics include, but are not limited to: chemical-induced internal disease; occupational internal disease; zoonotic disease that affects the internal organs; animal models; pharmacological modulation of internal disease caused by environmental impacts; modern approaches to ensuring safety in harmful production.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
