

## Analytical Chemistry on Environmental Detection and Remediation

Guest Editors:

### Dr. Jiejing Kong

Institute of Environmental Health and Pollution Control, School of Environmental Science and Engineering, Guangdong University of Technology, Guangzhou 510006, China

### Dr. Yi Wang

Institute of Environmental Health and Pollution Control, School of Environmental Science and Engineering, Guangdong University of Technology, Guangzhou 510006, China

### Dr. Xuyu Wang

School of Environmental and Chemical Engineering, Jiangsu University of Science and Technology, Zhenjiang 212100, China

Deadline for manuscript submissions:

**closed (12 April 2023)**

### Message from the Guest Editors

Most environmental issues are directly or indirectly related to chemicals. What potentially toxic substances are in the environment? Where do they come from? What happens when they enter the environment? What about their transformation? What harm could be done? What measures and monitoring should we take? What measures can be taken to prevent or reduce the environmental impact of new chemical products before they enter the environment? To investigate and understand the chemistry of our environment, contamination of the environment, and consequent impacts on environmental and public health, environmental analytical chemistry emerged and was applied in the initial detection and monitoring of pollutants, separation and removal of contaminants, and the recovery and purification of vital wastes and environmental remediation.

The development of environmental science thus depends on the development of environmental analytical chemistry. This Special Issue is seeking technical innovations in analytical chemistry for environmental research with an emphasis on novel contributions on environmental detection and remediation.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
