Message from the Guest Editor

Collaborative research efforts toward understanding maternal child health and practical solutions for improving health, wellbeing, and quality of care in families and communities are urgently needed. Families face more challenges than ever in relation to the history of unequal health, the present pandemic, and a post-pandemic future. At population level, we continue to grapple with basic health, mental health, nutrition, and reproductive health problems, especially in relation to social determinants of health. This call for papers seeks to highlight team science and interdisciplinary and transdisciplinary research in these topical areas. We particularly welcome research on interventions for health equity using a broad definition of maternal child health which considers life course intergenerationally, inclusive of social, political, community, and environmental factors.

This Special Issue is open to any subject area relating to family health and maternal child health and nutrition. Research papers, systematic reviews, qualitative research, methodology studies, and policy-relevant articles are all welcome.

Special Issue

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
