Deadline for manuscript  
submissions:

**31 December 2024**

### Message from the Guest Editors

Musculoskeletal injuries can affect any part of the human body, including bones, joints, cartilage, ligaments, tendons, muscles, and other soft tissues.

The rehabilitation of musculoskeletal injuries plays a key role in a proper model of care. The goal of a correct rehabilitation is to restore abilities, functions and autonomy after a musculoskeletal injury. The timing of rehabilitation represents a core concept in the management of musculoskeletal injuries.

According to the WHO, musculoskeletal conditions are the highest contributor to the global need for rehabilitation, and account for approximately two-thirds of all adults in need of rehabilitation, representing an important burden for public health.

In this Special Issue, we are pleased to invite researchers in the field of musculoskeletal injuries and their rehabilitation to submit high-quality articles or reviews related to the issues in these research areas.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
