Message from the Guest Editor

Dear Colleagues,

Volatility, uncertainty, complexity, and ambiguity (VUCA) are common terms used to describe current times. As the world emerges from a global pandemic, it faces considerable headwinds, such as geopolitical instability, climate change, and economic challenges to name a few. Against this backdrop, cardiovascular and renal diseases continue to increase, reflecting global population growth and changes in sociodemographic and cardiometabolic factors. More importantly, the burden of disease is not distributed equally across society, requiring changes on how we deliver care and how we focus on unique populations. Traditional approaches to the prevention, management, and palliation of cardiovascular and renal diseases require recalibration in order to consider the social determinants of health, embrace technological innovation, and meet the challenges of increasing demand in a dynamic and changing world.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
