submissions:

**closed (31 March 2022)**

### **Message from the Guest Editors**

Dear Colleagues,

The use of physical restraints in healthcare settings has been heavily debated due to the questionable ethical and legal issues affecting the autonomy and dignity of patients and the many adverse physical and psychosocial effects of these devices.

This Special Issue welcomes research papers on various aspects of physical restraint use in different healthcare settings, including individual, staff, and organizational factors contributing to their use, the role of knowledge and attitude of healthcare professionals, the decision-making process, interventions supporting physical restraint reduction, alternative strategies, and the perspectives of patients, family, and/or informal caregivers. We especially encourage the submission of interdisciplinary work and multi-center research. We welcome original research papers using different study designs, both quantitative and qualitative, as well as systematic reviews and meta-analyses.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
