### Message from the Guest Editors

In line with the WHO's mental health action plan (2019–2023), the current Special Issue aims at demonstrating the relevance of perinatal health for parents and children for the wellness of the whole community. The study of parental mental health issues in the pre- and postpartum periods, such as depression, anxiety, and parental stress, and their links to other relevant factors including couple relationship, attachment styles, infants' temperament, and neurobiological measures, highlights the need to think about models and methodologies that can be adapted to different contexts, particularly today's new family configurations.

We encourage contributions from a variety of areas including original qualitative and quantitative articles, reviews, and meta-analyses focused on parental mental health and correlated constructs and variables. We also encourage contributions on preventive and intervention models during pregnancy and the postpartum period to improve the parents' and their children's wellbeing.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
