### Message from the Guest Editors

The increase in surface mining operations has caused a number of environmental issues, including dust. With the continuous need to promote green and climate-smart mining, the prevention and control of mine dust pollution have become a research priority in recent years. To further research on this subject, there is a need to study a wide range of topics related to surface mine dust, including investigation, monitoring, identification, characterization, and capture of dust from mines, as well as improving existing dust control technologies, exploring and innovating new ones, and eventually implementing them. This Special Issue of IJERPH invites research on all aspects of dust pollution prevention and control in surface mines.

Deadline for manuscript submissions:

**closed (31 December 2022)**

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
