Message from the Guest Editors

Rural communities contribute greatly to each nation's economic outcomes, as well as their environmental and cultural diversity. A strong rural health workforce, particularly supporting public health and primary prevention, is a vital component of improving rural population health and rural communities.

This Special Issue of IJERPH focuses on evaluative research that informs outcomes of strategies to build a rural health workforce for meeting the needs of rural populations. Submissions are welcome on topics relating to those keywords listed below. In particular, we seek evidence of interventions that demonstrate improved health workforce outcomes of training and development, increased critical mass of health workers to service particular needs, increased health worker distribution or improved health worker retention and applications of new health workforce service models to meet demand. We welcome research from all healthcare disciplines and settings.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
