Message from the Guest Editor

Dear Colleagues,

Exposure to toxicants from tobacco products through inhalation results in numerous risks for lung injury and chronic disease. Well-validated analyses of smoke or aerosol constituents and the biomonitoring of exposure through analyses of biomarkers in body fluids are necessary. These data are required for assessments of health risks and epidemiological investigations of chronic diseases associated with the use of tobacco products. Manuscripts describing investigations of toxicants in emissions from tobacco products, biomarker investigations related to health risks with well-validated methods, the assessment of health risks from exposure to toxicants from tobacco products, and correlations with chronic disease are welcomed in this Special Issue.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
