Deadline for manuscript  
submissions:

**closed (28 February 2023)**

### Message from the Guest Editor

The aim of this Special Issue is to publish original researches or review articles that focus on state-of-the-art big data technologies used to investigate environmental pollution caused by traffic activities. Traffic emissions contribute a large part of overall air quality and soil environment problems. It will further deteriorate living environment and result in public health risks. With the rapid development of sensor networks, big data acquisition, and analysis technologies, many novel researches to model and forecast traffic emissions in a fine-grained spatio-temporal resolution have emerged over the years. Traffic emissions and pollutions are greatly influenced by economic and social situations. The complexity of social systems and human mobility, as well as the chemical reaction of emissions, require more cross-disciplinary approaches, in order to improve the accuracy and robustness of traffic emissions. In particular, we are interested in studies that involve the integration of GIS, remotely sensed imageries, crowd-sourced big data, traffic emission and diffusion models, spatio-temporal data mining, and machine learning technologies.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
