Deadline for manuscript  
submissions:

**closed (31 August 2019)**

### Message from the Guest Editor

Dear Colleagues,

The urban environment has long been associated with community health risks. However, quantifying environmental exposure for measuring urban environmental quality is always a challenge, since environmental components of the complex system across the urban environment are interacting with each other. Moreover, failure to quantify the environmental quality can result in a problematic estimation of environmental health risks.

Therefore, this Special Issue aims to target the following topics:

- 1) improvement of exposure assessments for measuring urban environmental quality;
- 2) linking indoor and outdoor environmental exposures by modelling;
- 3) novel design to spatially or spatio-temporally estimate urban environmental quality;
- 4) application of community health assessment with improved data for urban environmental quality.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
