

Urban Spaces, Environmental Exposures, Public Health, and Human Wellbeing

Guest Editor:

Dr. Man Yuan

School of Architecture and Urban Planning, Huazhong University of Science and Technology, Wuhan 430070, China

Deadline for manuscript submissions:

closed (30 April 2022)

Message from the Guest Editor

COVID-19 has put forward higher requirements for urban spatial health, and the study of healthy cities has once again become the focus of multidisciplines. Urban space has a direct or indirect effect on public health and human wellbeing. However, public health is affected by multiple complex factors and pathways, and most of the existing research results are single-element and fragmented, which brings challenges to the implementation of health-oriented spatial planning. From the perspective of the interaction between environmental exposure and physical activity, we aim to construct a relatively complete theoretical framework model between urban spaces, public health, and human wellbeing and propose health-oriented planning techniques.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
