Message from the Guest Editors

Evidence-based and -informed social, structural, and behavioral interventions have great potential to further reduce HIV transmission and synergistically improve the acceptability, adoption, persistence, feasibility, appropriateness, penetration, and fidelity of biomedical interventions such as PrEP, PEP, and Treatment as Prevention (TasP). More work is needed to improve health equity and to ensure that these tools effectively reach the key populations most impacted by HIV, including gay, bisexual, and other men who have sex with men (MSM); people of transgender experience; people involved in the sex trade; people who inject drugs; and people living with HIV. Racism, sexism, transphobia, lack of economic opportunities, and other social injustices continue to present barriers to ending the HIV epidemic. Papers addressing these topics, from a range of country and regional contexts globally, are invited for this Special Issue and may include quantitative, qualitative, or mixed-methods original research on intervention development, adaptation, implementation, evaluation, and/or outcomes.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
