Message from the Collection Editors

Dear Colleagues,

Considered one of the most effective measures in the field of public health, vaccination has had a notable impact on the control and reduction of morbidity and mortality from communicable diseases. The COVID-19 pandemic has also influenced the field of vaccinology in several aspects; on one hand, the strength of immunization programs is being tested, and some countries already fear that they may not reach the expected vaccination coverage, with the consequent risk of epidemic outbreaks; on the other hand, getting a vaccine against COVID-19 brings other issues to light: Who should be the initial recipients of the vaccine? What logistical problems will arise? Will they be well accepted by the population? Will the administration of this vaccine slow down the implementation of other vaccination programs?

In this Topical Collection of IJERPH, we invite you and your colleagues to submit original articles, reviews, comments, or new hypotheses aimed at answering the new challenges in the field of vaccinology.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
