### Message from the Guest Editors

Dear Colleagues,

Twentieth-century human development has brought the Earth into a new epoch that has been defined by many researchers as the Anthropocene.

In the Anthropocene, scientists have to face a new and challenging problem: How to support human well-being without compromising the Earth's capacity to provide the resources that human societies need. A pivotal role for this aim is played by the geo scientists involved in deepening the knowledge of our, and other, planets.

This Special Issue focuses on:

- Soil/water management and quality
- Heavy metal pollution, remediation, restoration
- Cohabitation with heavy metals anomalies
- Circular economy: re-utilization of wastes
- New ore deposits and geo-resources
- Renewable energy sources
- Urban geology, smart cities and health
- Environmental resilience

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
