Message from the Guest Editors

The world's population is aging; it is estimated that between 2015 and 2030, the number of people aged 60 and over will grow by 56% worldwide. Age is associated with increases in chronic diseases, poor health, functional limitations, and morbidity, resulting in a greater use of health services and health cost. This is why in recent years, there has been an increasing interest in how to respond to the irreversible phenomenon of an aging population. To respond to this issue, the amount of scientific research and development of policies have grown, to increase the health level and participation of older people.

This Special Issue seeks papers on new research on the phenomenon of aging, new therapies to improve the health status of older people, and epidemiological surveys concerning the problems older people face. We also welcome high-quality systematic reviews related to these matters. I would be delighted if this Special Issue serves as a trigger for elaborate policies and future programs of health to increase the health level and participation of older people and to find innovative solutions to the economic, social, and health problems of an aging population.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
