### Message from the Guest Editors

Dear Colleagues,

One-third of all deaths are caused by cardiovascular diseases (CVDs), which are among the most common causes of death not only in Europe but globally. There is no doubt that nutritional status and

CVDs are interrelated. The nutritional status in CVD patients is undoubtedly related to their quality of life, risk of re-hospitalization, prolonged hospitalization, complications, and increased risk of death during in-patient treatment. Consequently, disease-related malnutrition significantly increases medical costs, and its importance in the course of the disease remains underappreciated.

Potential topics for this Special Issue include but are not limited to novel methods of nutritional assessment, malnutrition, overweight and obesity, personalized nutrition, dietary requirements and dietary patterns, lengths of hospitalization, and in-hospital and long-term mortality.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
