Deadline for manuscript submissions:

**closed (31 January 2022)**

### Message from the Guest Editors

Adverse Childhood Experiences (ACE) are known to negatively affect those who were subjected to them. Coronavirus disease 2019 (COVID-19), which has kept many families locked down at home together, has been shown to negatively affect the frequency and severity of child abuse, which could increase when there is no school and it is more difficult for child treatment organizations and other adults to notice what children may be going through. Government, communities, and clinicians are trying to identify and address these issues and help adults who were subjected to abuse in their childhood. This Special Issue aims to present research articles and, especially, reviews that indicate trends in the approach to addressing negative childhood experiences and highlight various psychological strategies to treat children subjected to abuse and neglect.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
