Deadline for manuscript  
submissions:  
**closed (23 March 2023)**

### Message from the Guest Editors

Climate change and air pollution continue to be critical public health issues. The health impacts of climate change are broad, ranging from issues related to food security, water- and vector-borne diseases, heat events, extreme weather, mental health, and air pollution.

This Special Issue is aimed at capturing evidence exploring the combined health effects of air pollution and climate change. Articles may include direct effects on health as well as potential changes in health hazards. Examples include studies exploring health outcomes resulting from air pollution during heat events, combined air pollution and weather-related health effects, or changes in the toxicity of air pollutants as a result of changes in climate. All types of studies are welcome, including scoping and systematic reviews. Interdisciplinary and global studies focused on low- and middle-income countries are particularly encouraged.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
