Message from the Guest Editors

Dear Colleagues,

Adverse health effects caused by asbestos exposure are an important global health issue. In the countries where anti-asbestos policies have been effectively applied, malignant mesothelioma has become the neoplasm of greatest relevance, with rates that are still increasing or showing a plateau, depending on the time from the ban. Little is known about epidemiology of asbestosis and lung cancer, as well as of mesothelioma, in the countries where the use of control measures is more limited. This Special Issue will welcome contributions on asbestos-related diseases, fibers characterization, exposure assessment, risk modification with cumulative exposure, latency, and time since cessation, both for the specific asbestos types and for the asbestos-like minerals. Papers describing successful anti-asbestos policies, are welcome.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
