Deadline for manuscript  
submissions:

**closed (30 September 2015)**

### **Message from the Guest Editors**

Dear Colleagues,

Epidemiological studies of weather influences upon human health have historically relied on coarse aggregations at the scale of municipalities or larger. Health outcomes were then typically associated with point data of atmospheric conditions—whether thermal, pollution, or extreme environments—from which individual-level exposure would be approximated. Technological advances in sensing equipment now allow researchers to more precisely assess environmental exposure at the scale of an individual person. These more-localized response data, geocoded and available on finer scales, have enabled more in-depth responses to be assessed. The improved ability to geospatially integrate and analyze all these data has led to exciting new research, in which the variability of individuals' exposure and response is coming to light.

Dr. P. Grady Dixon

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
