submissions:

closed (30 November 2022)

Message from the Guest Editors

Cancer is among the leading causes of death worldwide. Environmental and/or potentially modifiable risk factors are important to investigate to reduce the overall burden of cancer. Indeed, more than 40% of cancers are attributable to modifiable lifestyle risk factors and could be preventable. Characterizing the constellation of exposures and risk factors over the life course is key in cancer prevention. In this Special Issue, we welcome manuscript submissions focused on understanding how exposures to known cancer risk or protective factors may vary based on the timing of exposure across the life course. The requested manuscripts can focus on multiple cancer sites and risk factors, including alcohol, tobacco and secondhand smoke, traffic-related air pollution and chemicals, as well as protective behaviors, such as consuming a healthy diet, being physically active, maintaining a healthy weight, and using sun protection.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
