Message from the Guest Editors

Cancer is the leading cause of death worldwide and affects both adults and children. Risk factors include tobacco use, unhealthy diet, physical inactivity, and air pollution. Early detection through screening and diagnostic tools, and appropriate treatment has helped to reduce cancer mortality. However, cancer remains a leading cause of death. The development of comprehensive understanding of best practices for cancer prevention, diagnosis, treatment, and survivorship requires multi-faceted research and innovative solutions to improve the cancer patient's journey. This Issue welcomes article, reviews, and case reports which highlight:

- Methods to increase early detection and/or ways to provide access to screening resources for both pediatric and adult populations;
- Novel approaches for cancer prevention through lifestyle/behavior modification or environments;
- Novel treatments that can be used to treat adult and pediatric cancers;
- Research that addresses survivorship care in pediatric and adult populations, as well as methods to improve health;
- Novel approaches to improving the cancer patient journey from diagnosis, treatment and through survivorship.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
